# PRAKTIKUM PEMROGRAMAN WEB LANJUT TUGAS PERTEMUAN 5

# Blade View, Web Templating (AdminLTE), Datatables DISUSUN OLEH:

NIM:2341720042

**GILANG PURNOMO** 

# PROGRAM STUDI D-IV TEKNIK INFORMATIKA JURUSAN TEKNOLOGI INFORMASI POLITEKNIK NEGERI MALANG MARET 2025

## Praktikum 1 – Integrasi Laravel dengan AdminLte3

1. Dalam root folder project lakukan command berikut, untuk mendefinisikan requirement project.

```
composer require jeroennoten/laravel-adminIte
Using version ^3.15 for jeroennoten/laravel-adminIte
PS C:\laragon\www\Web_Lanjut\Minggu 5\PWL_POS>
```

2. Melakukan instalasi requirement project di atas dengan command berikut:

```
php artisan adminite:install
```

Perintah di atas akan meng-install:

- AdminLTE distribution files dan dependensinya (Bootstrap, jQuery, etc.) dalam folder public/vendor.
- Konfigurasi package di file config/adminite.php
- Paket translasi di folder lang/vendor/adminlte/
- Dalam composer.json akan otomatis ditambahkan require untuk laravel-adminlte

```
{} composer.json > ...
          "name": "laravel/laravel",
 2
          "type": "project",
 3
         "description": "The skeleton application for the Laravel framework.",
 4
         "keywords": ["laravel", "framework"],
         "license": "MIT",
 6
 7
         "require": {
             "php": "^8.1",
 8
 9
              "guzzlehttp/guzzle": "^7.2",
             "jeroennoten/laravel-adminite": "^3.9",
10
             "laravel/framework": "^10.10",
11
             "laravel/sanctum": "^3.3",
12
             "laravel/tinker": "^2.8"
13
14
         },
15
          "require-dev": {
              "fakerphp/faker": "^1.9.1",
16
             "laravel/pint": "^1.0",
17
            "laravel/sail": "^1.18"
18
           "mockery/mockery": "^1.4.4"
19
           "nunomaduro/collision": "^7.0",
20
             "phpunit/phpunit": "^10.1",
             "spatie/laravel-ignition": "^2.0"
22
23
          "autoload": {
24
             "psr-4": {
```

#### Jawab:

```
PS C:\laragon\www\Web_Lanjut\Minggu 5\PWL_POS> php artisan adminite:install
Adminite assets files published successfully
Configuration file published successfully
Translation files published successfully
The installation is complete.
"jeroennoten/laravel-adminite": "^3.15",
```

Instalasi berhasil.

3. Buat file resources/views/layout/app.blade.php. Isi dengan kode berikut.

```
Minggu 5 > PWL_POS > resources > views > layouts > ** app.blade.php > ...

1 @extends('adminlte::page')
     @section('title')
         {{ config('adminite.title') }}
@hasSection('subtitle') | @yield('subtitle') @endif
     @section('content_header')
    @hasSection('content_header_title')
       <i class="fas fa-xs fa-angle-right text-muted"></i>
@yield('content_header_subtitle')
     Version: {{ config('app.version', '1.0.0') }}
            $(document).ready(function() {
            // Add your common script logic here...
        {{-- You can add AdminLTE customizations here --}}
```

4. Edit resources/views/welcome.blade.php, kemudian replace seluruh kodenya dengan kode berikut

Untuk menggunakan blade template ini cukup dengan extend **AdminLTE layout** dengan cara @extends('adminlte::page').

Template yields di beberapa bagian terklasifikasi dalam 2 yield:

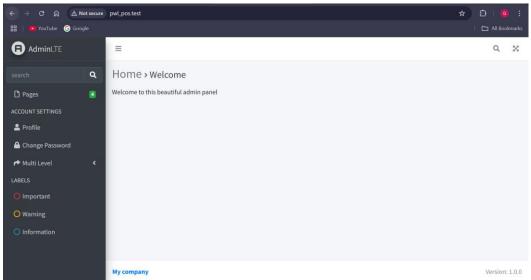

- main: Biasa digunakan untuk extending the layout
- misc: untuk kasus yang tidak biasa, atau hanya situasi tertentu.

Dokumentasi lebih detail terdapat di link berikut:

https://github.com/jeroennoten/LaravelAdminLTE/wiki/Usage

5. Kembali ke browser, menuju ke halaman awal.

Jawab:

#### Commit:

https://github.com/Gilangp/Pemrograman\_Web\_Lanjut/commit/7ac98b33773f7a00ac3e950b481dfca50160583f

## Praktikum 2 – Integrasi dengan DataTables

1. Install Laravel DataTables

 Pastikan nodejs sudah terinstall, dengan perintah npm -v. Jika belum install nodejs package manager dari <a href="https://nodejs.org/dist/v20.11.1/nodev20.11.1-x64.msi">https://nodejs.org/dist/v20.11.1/nodev20.11.1-x64.msi</a>
 Npm digunakan untuk manajemen package javascript.

```
PS C:\laragon\www\Web_Lanjut\Minggu 5\PWL_POS> \frac{1}{1} 8.18.0
```

3. Install Laravel DataTables Vite dan sass

```
npm i laravel-datatables-vite --save-dev
 npm install -D sass
PS C:\laragon\www\Web_Lanjut\Minggu 5\PWL_POS> npm i laravel-datatables-vite --sav
added 47 packages, and audited 48 packages in 1m
13 packages are looking for funding
  run `npm fund` for details
 moderate severity vulnerabilities
To address all issues (including breaking changes), run:
 npm audit fix --force
npm notice New major version of npm available! 8.18.0 -> 11.2.0
npm notice (hangelog: https://github.com/npm/cli/ncleases/tag/v11.2.0 npm notice (Run npm install -g npm@11.2.0 to update!
PS C:\laragon\www\Web_Lanjut\Minggu 5\PWL_POS> npm install -D sass
added 15 packages, and audited 63 packages in 9s
17 packages are looking for funding run `npm fund` for details
 moderate severity vulnerabilities
To address all issues (including breaking changes), run:
 un `npm audit` for details.
```

4. Edit file resources/js/app.js

5. Buatlah file resources/saas/app.scss

6. Jalankan dengan npm run dev

```
O PS C:\laragon\www\Web_Lanjut\Minggu 5\PWL_POS> npm run dev

> dev
> vite

VITE v5.4.14 ready in 3096 ms

→ Local: http://localhost:5173/
→ Network: use --host to expose
→ press h + enter to show help

LARAVEL v10.48.28 plugin v1.2.0

→ APP_URL: http://localhost
```

7. Selanjutnya kita akan buat datatables untuk kategori

```
php artisan datatables:make Kategori

PS C:\laragon\www\Web_Lanjut\Minggu 5\PWL_POS> php artisan datatables:make Kategori

INFO DataTable [C:\laragon\www\Web_Lanjut\Minggu 5\PWL_POS\app\DataTables\KategoriDataTable.php] created successfully.
```

8. Kita edit KategoriDatable untuk mengatur kolom apasaja yang ingin ditampilkan Sesuaikan dengan kodeprogram berikut

```
Minggu 5 > PWL_POS > app > DataTables > ♥ KategoriDataTable.php > PHP Intelephense > ❤ KategoriDataTable > ♡ html
         namespace App\DataTables;
         use App\Models\KategoriModel;
         use Yajra\DataTables\Html\Button;
         use Yajra\DataTables\Html\Column;
         use Yajra\DataTables\Services\DataTable;
         use Illuminate\Database\Eloquent\Builder as QueryBuilder;
        use Yajra\DataTables\EloquentDataTable;
         use Yajra\DataTables\Html\Builder as HtmlBuilder;
         Codeium: Refactor | Explain class KategoriDataTable extends DataTable
                * @param QueryBuilder $query Results from query() method.
               public function dataTable(QueryBuilder $query): EloquentDataTable
                     return (new EloquentDataTable($query))
                           // ->addColumn('action', 'kategori.action')
->setRowId('id');
               public function query(KategoriModel $model): QueryBuilder
                    return $model->newQuery();
           public function html(): HtmlBuilder
                               ->setTableId('kategori-table')
->columns($this->getColumns())
                               ->minifiedAjax()
// ->dom('Bfrtip') jika ingin menampilkan button excel, csv, pdf, dll maka aktifkan ini.
                                // ->dom('Bfr
->orderBy(1)
                                ->selectStyleSingle()
                               -selectStylesIngle()
-sbuttons(:make('excel'),
Button::make('csv'),
Button::make('pdf'),
Button::make('print'),
Button::make('reset'),
Button::make('reset'),
           public function getColumns(): array
                     // ->width(60)
// ->add(class('text-center'),
Column::make('kategori_id'),
Column::make('kategori_yode')->addClass('text-start'),
Column::make('kategori_nama'),
Column::make('reneated_at'),
Column::make('updated_at'),
```

9. Ubah kategori model, sesuaikan seperti berikut

```
Minggu 5 > PWL_POS > app > Models > ** KategoriModel.php > ...

5     use Illuminate\Database\Eloquent\Factories\HasFactory;
6     use Illuminate\Database\Eloquent\Model;
7     use Illuminate\Database\Eloquent\Relations\HasMany;
8
9     class KategoriModel extends Model
10     {
11          protected $table = 'm_kategori';
12          protected $primaryKey = 'kategori_id';
13
14          protected $fillable = ['kategori_kode', 'kategori_nama'];
15
16          public function barang(): HasMany
17
18          return $this->hasMany(BarangModel::class, 'barang_id', 'barang_id');
19     }
20
21
```

10. Ubah Kategori Controller sesuaikan dengan skrip berikut:

11. Buat folder kategori di dalam resources/view, kemudian buat view blade index untuk kategori resources/views/kategori/index.blade.php

12. Pastikan route untung kategori sudah tersedia

```
24 Route::get('/kategori', [KetegoriController::class, 'index']);
```

13. Sesuaikan app layout seperti kode berikut

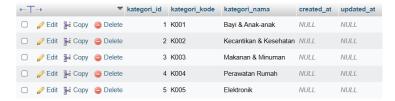

```
Minggu 5 > PWL_POS > resources > views > layouts > * app.blade.php > ...

1 @extends('adminlte::page')
      @section('title')
         {{ config('adminite.title') }}

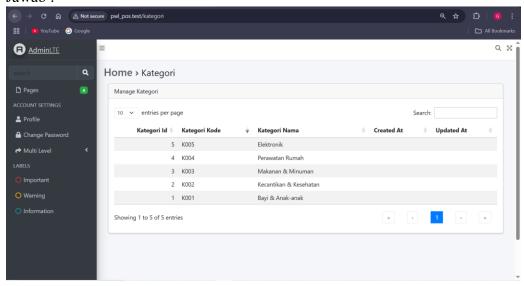

@hasSection('subtitle') | @yield('subtitle') @endif
      @vite('resources/js/app.js')
      {{-- Extend and customize the page content header --}}
          @hasSection('content_header_title')
              @yield('content_header_title')
                   <small class="text-dark"</pre>
                           @yield('content_header_subtitle')
              Version: {{ config('app.version', '1.0.0') }}
           <style type="text/css">
    {{-- You can add AdminLTE customizations here --}}
```

14. Menset ViteJs / script type defaults

15. Isikan beberapa data ke table kategori Jawab :

16. Datatables sudah dapat di load di /kategori Jawab :

#### Commit:

https://github.com/Gilangp/Pemrograman\_Web\_Lanjut/commit/7e530bc16cc29765f08f2e2927e891d4f33bda49

## Praktikum 3 – Membuat form kemudian menyimpan data dalam database

1. Menyesuaikan routing, tambahkan dua routing berikut

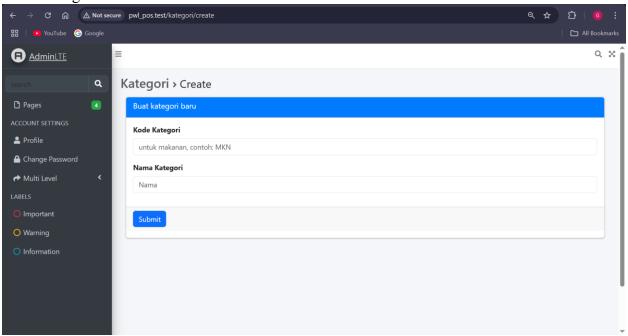

```
Route::get('/kategori/create', [KategoriController::class, 'create']);
Route::post('/kategori', [KategoriController::class, 'store']);
```

2. Tambahkan dua function berikut dalam KategoriController

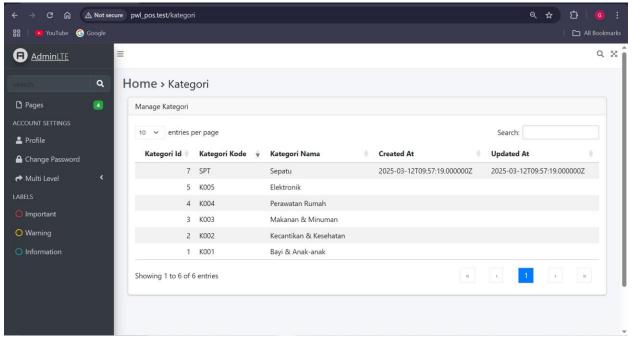

3. Dalam folder views/kategori, buatlah file dengan nama create.blade.php

4. Kita lakukan pengecualian proteksi CsrfToken. Karena kita belum melakukan otentikasi . Kita edit dalam file berikut:

5. Akses kategori/create

6. Halaman kategori

#### Commit:

https://github.com/Gilangp/Pemrograman\_Web\_Lanjut/commit/881b5538238635216dd4 0083ad0bfbec2b4743d5

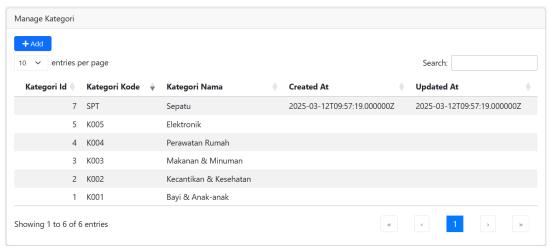

# **Tugas Praktikum**

1. Tambahkan button Add di halaman manage kategori, yang mengarah ke create kategori baru

Jawab:

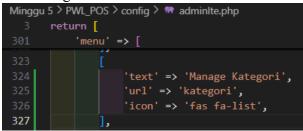

Kode Program

Output:

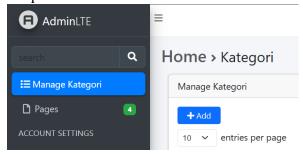

2. Tambahkan menu untuk halaman manage kategori, di daftar menu navbar Jawab :

#### Kode Program:

#### Output:

3. Tambahkan action edit di datatables dan buat halaman edit serta controllernya Jawab :

#### Kode Program:

#### Datatables

```
Column::make('kategori_id'),
Column::make('kategori_kode')->addClass('text-start'),
Column::make('kategori_nama'),
Column::make('created_at'),
Column::make('updated_at'),
Column::computed('action')
->exportable(false)
->printable(false)
->addClass('text-center'),
];
}
```

#### Controller

```
public function edit($id)
{
    $kategori = KategoriModel::find($id);
    return view('kategori.edit', ['data' => $kategori]);
}

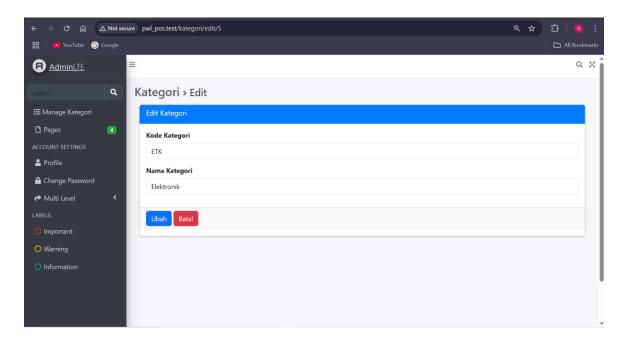

public function update($id, Request $request)
{
    $kategori = KategoriModel::find($id);
    $kategori->kategori_kode = $request->kategori_kode;
    $kategori->kategori_nama = $request->kategori_nama;

$kategori->save();

return redirect('/kategori');
}
```

#### View

#### Output:

4. Tambahkan action delete di datatables serta controllernya

#### Jawab:

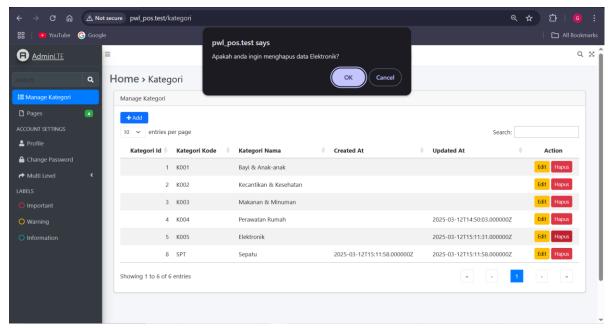

Kode Prorgram:

#### Datatables

```
return (new EloquentDataTable($query))
->addColumn('action', function($row)(
return 'ca href="/kategori_deity' . $row->kategori_id . '" class="btn btn-warning btn-sm">Edit</a>
return 'ca href="/kategori_deity' . $row->kategori_id . '" class="btn btn-danger btn-sm" onclick="return confirm(\'Apakah anda ingin menghapus data '. $row->kategori_nama .'?\')">Hapus</a>
| '' class="btn btn-danger btn-sm" onclick="return confirm(\'Apakah anda ingin menghapus data '. $row->kategori_nama .'?\')">Hapus</a>
| '' class="btn btn-danger btn-sm" onclick="return confirm(\'Apakah anda ingin menghapus data '. $row->kategori_nama .'?\')">Hapus</a>
| '' class="btn btn-danger btn-sm" onclick="return confirm(\'Apakah anda ingin menghapus data '. $row->kategori_nama .'?\')">Hapus</a>
| '' class="btn btn-danger btn-sm" onclick="return confirm(\'Apakah anda ingin menghapus data '. $row->kategori_nama .'?\')">Hapus</a>
| '' class="btn btn-danger btn-sm" onclick="return confirm(\'Apakah anda ingin menghapus data '. $row->kategori_nama .'?\')">Hapus</a>
| '' class="btn btn-danger btn-sm" onclick="return confirm(\'Apakah anda ingin menghapus data '. $row->kategori_nama .'?\')">Hapus</a>
| '' class="btn btn-danger btn-sm" onclick="return confirm(\'Apakah anda ingin menghapus data '. $row->kategori_nama .'?\')">Hapus</a>
| '' class="btn btn-danger btn-sm" onclick="return confirm(\'Apakah anda ingin menghapus data '. $row->kategori_nama .'?\')">Hapus</a>
| '' class="btn btn-danger btn-sm" onclick="return confirm(\'Apakah anda ingin menghapus data '. $row->kategori_nama .'?\')">Hapus</a>
```

#### Controller

Output:
